DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

2. The disclosure is objected to because of the following informalities:

a) On **page 4 line 2**, after "selectivity filter" insert --SF1--.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. **Claims 1 and 3-4** are rejected under 35 U.S.C. 102(b) as being anticipated by **Roth et al. (US Patent # 6370370)**.

Consider **claim 1**, Roth et al. clearly show and disclose a receiver signal strength indication circuit comprising: means for discretely controlled amplifying an input signal (controllable amplifiers RV3 and RV1); means coupled to an output of the amplifying means for furnishing a receiver signal strength indication (signal-strength detection unit RSSI)(Abstract, column 2 lines 38-46 and 60-62, Figure 1).

Consider **claim 3, as applied to claim 1 above**, Roth et al. clearly show and disclose an integrated tuner (Abstract and Figure 1) comprising a receiver signal strength indication circuit, wherein the amplifying means include selectivity filtering means (BF1 and BF2)(column 3 lines 5-7).

Consider **claim 4, as applied to claim 1 above**, Roth et al. clearly show and disclose an integrated tuner (Abstract and Figure 1) comprising a receiver signal strength indication circuit, wherein the amplifying means include a mixer (the mixer M).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

7. **Claim 2** is rejected under 35 U.S.C. 103(a) as being unpatentable over **Roth et al. (US Patent # 6370370)** in view of **Culpepper et al. (US Patent # 5657026)**.

Art Unit: 2631

Consider **claim 2, as applied to claim 1 above**, Roth et al. fail to disclose the receiver signal strength indication furnishing means include a narrow filter for measuring a power of the input signal with reduced influence from neighboring channels.

In the same field of endeavor, Culpepper et al. clearly disclose a receiver signal strength indication furnishing means include a narrow filter (narrow band crystal filter 110) for measuring a power of the input signal (RSSI) (column 5 lines 8-19, figures 4 and 6) as to eliminate signal components of interference waves on adjacent channels.

Therefore it would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate the selection techniques taught by Culpepper et al. into the receiver signal strength indication furnishing means of Roth et al. to eliminate signal components of interference waves on adjacent channels, thus the signal-strength detection unit can accurately detect the signal level of the desired channel.
